ElderCareAI Caregiver User Guide

Phone application 1.4.1 and Galaxy Watch6 application 1.4.5. This guide follows the current caregiver workflow and names the screen to capture for each report figure. Use a demonstration account or conceal names, phone numbers, medical notes and exact map coordinates.

Watch heart rate and live location update while monitoring and connectivity are active. Spot oxygen requires a manual measurement; sleep and overnight records arrive after Samsung Health sync. Missing data is not a normal measurement. App status bands and the HRV stress estimate are not medical diagnoses.

1 Sign in

Figure 1. Sign in. Capture the Sign in with Google button.

Open the new phone build; sign in with the caregiver account.

2 Care setup

Figure 2. Care setup. Capture caregiver and older-adult setup with private fields concealed.

Complete profiles and continue to the wearable step.

3 Watch pairing

Figure 3. Watch pairing. Capture Connect or change watch and the paired Galaxy Watch6 status.

Pair the patient watch and allow sensor, activity and location permissions.

4 Watch monitoring

Figure 4. Watch monitoring. Capture the watch with Start monitoring or the active live walk state.

Open ElderCareAI on the watch and start monitoring; a watch screenshot or photo is suitable.

5 Home dashboard

Figure 5. Home dashboard. Capture current vitals and their text status badges.

Check that incoming watch BPM changes its label; 80 to 110 is the high display band.

6 Health vitals

Figure 6. Health vitals. Capture BPM, oxygen, sleep, steps, skin temperature and stress when available.

Show the actual measurement time; unavailable metrics may show waiting or baseline text.

7 Vital detail

Figure 7. Vital detail. Capture the heart-rate detail and one status label.

Tap a vital card to see its original value, time and general wellness explanation.

8 Health history

Figure 8. Health history. Capture Settings > Health History with its sync status and one saved sleep record.

Sleep and overnight oxygen are imported after Samsung Health records and syncs them.

9 Analytics

Figure 9. Analytics. Capture Line and Bar chart modes, date filter and one selected timestamp.

Open Health > Analytics; change metric or date range and inspect actual saved measurements.

10 Preventive insights

Figure 10. Preventive insights. Capture Health > AI Insights for one recorded vital.

Read the dated general wellness context; it does not establish a diagnosis.

11 Live location

Figure 11. Live location. Capture the watch marker, location source, accuracy and safe-zone outline.

Start watch live walk outdoors with internet; confirm the marker changes while phone stays still.

12 Medication list

Figure 12. Medication list. Capture Care > Medications with image, 12-hour reminder time and status.

Use a demonstration medication if the actual list contains private details.

13 Prescription draft

Figure 13. Prescription draft. Capture Elle prescription card and the review form.

Choose an image, inspect the draft, correct errors and confirm against the original before saving.

14 Care schedule

Figure 14. Care schedule. Capture Care > Schedule with two different times and an activity status.

Check chronological order for future appointments and medications.

15 Appointment

Figure 15. Appointment. Capture Care > Appointments and a saved upcoming visit.

Enter purpose, date, time, doctor and location; check the 15-minute and at-time reminders.

16 Alerts and SOS

Figure 16. Alerts and SOS. Capture collapsed Automatic vital alerts and visible SOS button.

Open Alerts; expand rules for a second screenshot if showing review thresholds.

17 Emergency contacts

Figure 17. Emergency contacts. Capture caregiver, family and doctor priority with numbers concealed.

Set names and phones in Settings; open the SOS contact list without placing a test call.

18 Notifications

Figure 18. Notifications. Capture two saved messages or a single alert with original time.

For a same-time demonstration, schedule two safe demo reminders and dismiss each popup in turn.

19 Elle assistant

Figure 19. Elle assistant. Capture a non-identifying question and its answer.

Ask about existing saved records; confirm the response is based on available data.

20 Settings and exports

Figure 20. Settings and exports. Capture Galaxy Watch6 integration, background notification option and PDF exports.

Enable background notifications on the caregiver phone when Firebase is configured.

Screenshot checklist for the administrator portal

- Admin sign in: Separate administrator account sign-in; hide credentials.
- Overview: Caregiver and patient counts, sync age and recent events.
- Manage accounts: Caregiver list and its linked older-adult profiles; hide identifying fields.
- System monitor: Watch pairing and vital sync status, with IDs masked.
- Alerts and notifications: Alert, notification and emergency lists with personal details concealed.
- Generate reports: Date filters and a CSV report action; do not show patient identifiers.
- Manage security: Admin list and audit activity, with emails and IDs concealed.

Demonstration checks

For a same-time reminder check, save a demonstration medication and appointment several minutes ahead at the same time. Keep the app open, dismiss the first popup and capture the second separately. Use the phone notification list for background evidence. Clear demonstration entries afterward.

For GPS, keep the paired phone stationary and watch the source and accuracy indicator while the watch wearer walks within Wi-Fi coverage. A 10–20 metre home safe zone should be tested only after a fresh accurate watch fix; poor accuracy can delay the exit decision.
