ElderCareAI Integration Testing

Thirty selected integration cases cover the most important transitions between app screens, saved records, reminders, reports, and emergency actions. Results are from the Jest run on 9 November 2026.

Proponent	Test Case ID	Module 1	Integration Process	Module 2	Precondition	Expected Result	Actual Result	Result
	INT-001	Authentication	Route a signed-in caregiver with an incomplete profile.	Onboarding	Session exists; caregiver setup is incomplete.	Caregiver setup opens.	Performed as expected	Passed
	INT-002	Authentication	Route a signed-in caregiver after all setup steps.	Home	Session and onboarding are complete.	Home route opens.	Performed as expected	Passed
	INT-003	Health Data	Display synchronized heart rate and oxygen.	Health Vitals	Patient has a saved vital reading.	Health shows both measurements.	Performed as expected	Passed
	INT-004	Health Data	Interpret recorded sleep duration.	Health Vitals	Latest sleep duration is 5.5 hours.	Health shows the below-guide context label.	Performed as expected	Passed
	INT-005	Health Data	Analyze low blood oxygen.	Health Insights	Latest SpO_2 is 92%.	Attention insight appears.	Performed as expected	Passed
	INT-006	Health Data	Request a trend with limited history.	Health Predictions	Only two distinct readings exist.	Prediction remains pending.	Performed as expected	Passed
	INT-007	Health Data	Project a trend from saved readings.	Health Predictions	Four distinct readings exist.	Heart-rate trend card appears.	Performed as expected	Passed
	INT-008	Health Data	Flag abnormal readings.	Health Anomalies	Latest heart rate is 118 bpm and SpO_2 is 92%.	Both thresholds appear as anomalies.	Performed as expected	Passed
	INT-009	Medication Schedules	Show an as-needed medication in the care plan.	Dose Status	As-needed schedule is saved.	Medication and as-needed status appear.	Performed as expected	Passed
	INT-010	Medication Logs	Apply a taken log to a saved schedule.	Dose Status	Today's taken log matches the medication.	Care plan shows Taken today.	Performed as expected	Passed
	INT-011	Medication Schedules	Load an active schedule and set its reminder.	Notifications	Active schedule and permission exist.	Patient-specific native reminder is scheduled and stored.	Performed as expected	Passed
	INT-012	Care Plan	Save an as-needed medication.	Medication Schedules	Caregiver enters a medication name.	Schedule saves with no timed notification.	Performed as expected	Passed
	INT-013	Care Plan	Record a medication dose.	Medication Logs	Active schedule is visible.	Taken log saves and status refreshes.	Performed as expected	Passed
	INT-014	Care Plan	Delete an active medication.	Notifications	Schedule has a saved reminder.	Schedule deactivates and reminder is canceled.	Performed as expected	Passed
	INT-015	Appointments	Save a future visit.	Notifications	Caregiver enters a visit title and doctor.	Patient-named appointment reminder is scheduled.	Performed as expected	Passed
	INT-016	Health Data	Export patient-scoped readings.	PDF Reports	Patient has synchronized vital history.	PDF contains patient and reading data and opens sharing.	Performed as expected	Passed
	INT-017	Medication Schedules	Export patient medication entries.	PDF Reports	Medication schedule exists.	PDF contains the medication and instructions and opens sharing.	Performed as expected	Passed
	INT-018	Elle Chat	Handle an assistant service failure.	Chat Persistence	AI endpoint returns an error.	Friendly error appears; no false reply is saved.	Performed as expected	Passed
	INT-019	Appointments	Load a scheduled future visit.	Notifications	Visit and notification permission exist.	Appointment reminder includes patient, doctor, and clinic.	Performed as expected	Passed
	INT-020	Appointments	Delete a scheduled visit.	Notifications	Visit has a saved reminder.	Visit disappears and reminder is canceled.	Performed as expected	Passed
	INT-021	Elle Chat	Follow a medication action in an assistant reply.	Care Navigation	Reply mentions the medication schedule.	Open Meds routes to the medication tab.	Performed as expected	Passed
	INT-022	Care Plan	Save a twice-daily medication.	Notifications	Caregiver selects twice daily.	08:00 and 20:00 save and both reminders are scheduled.	Performed as expected	Passed
	INT-023	Watch alert	Two local care reminders fire together while app is open.	Foreground queue	Controlled test fixture exists	Medication and appointment each show a separate popup and play audio.	Performed as expected	Passed
	INT-024	Notification owner	A reminder carries a different account or patient.	Caregiver session	Controlled test fixture exists	No foreign-account or foreign-patient popup appears.	Performed as expected	Passed

Proponent	Test Case ID	Module 1	Integration Process	Module 2	Precondition	Expected Result	Actual Result	Result
	INT-025	Monitoring records	Supabase returns saved readings and a new event.	Analytics chart	Controlled test fixture exists	Actual values, timestamps and live updates appear; foreign rows are omitted.	Performed as expected	Passed
	INT-026	Watch steps	Daily step RPC returns a saved total, then a higher update.	Daily history	Controlled test fixture exists	One displayed day changes to the new total without double-counting.	Performed as expected	Passed
	INT-027	Medication image	Save an image and request its display URL.	Private storage	Controlled test fixture exists	Owner and patient path is used; an expiring signed URL loads it.	Performed as expected	Passed
	INT-028	Prescription draft	Caregiver edits extracted text, adds a photo and confirms.	Medication save	Controlled test fixture exists	No medication saves before confirmation; corrected fields are saved.	Performed as expected	Passed
	INT-029	Emergency contacts	Open contact priority and choose caregiver.	Dial action	Controlled test fixture exists	Priority list appears and only selected number opens the dialer.	Performed as expected	Passed
	INT-030	Care plan	Load past, future and completed visits into Schedule.	Appointments	Controlled test fixture exists	Upcoming visits sort by date/time and completed activity is separate.	Performed as expected	Passed

Each table ID matches one INT-###.test.tsx file. App integration tests use controlled Supabase and native-service fixtures; physical watch and phone behavior must be checked separately.
